

Growth Rates at CHC

- Alkuin Koenig (Max)
- Diego Aliaga
 - data, results and further information at:
https://github.com/daliagachc/GR_chc/

NPF event clasification

based on Maso, M. D. et al. Formation and growth of fresh atmospheric aerosols: eight years of aerosol size distribution data from SMEAR II, Hyytiala, Finland. 10, 15

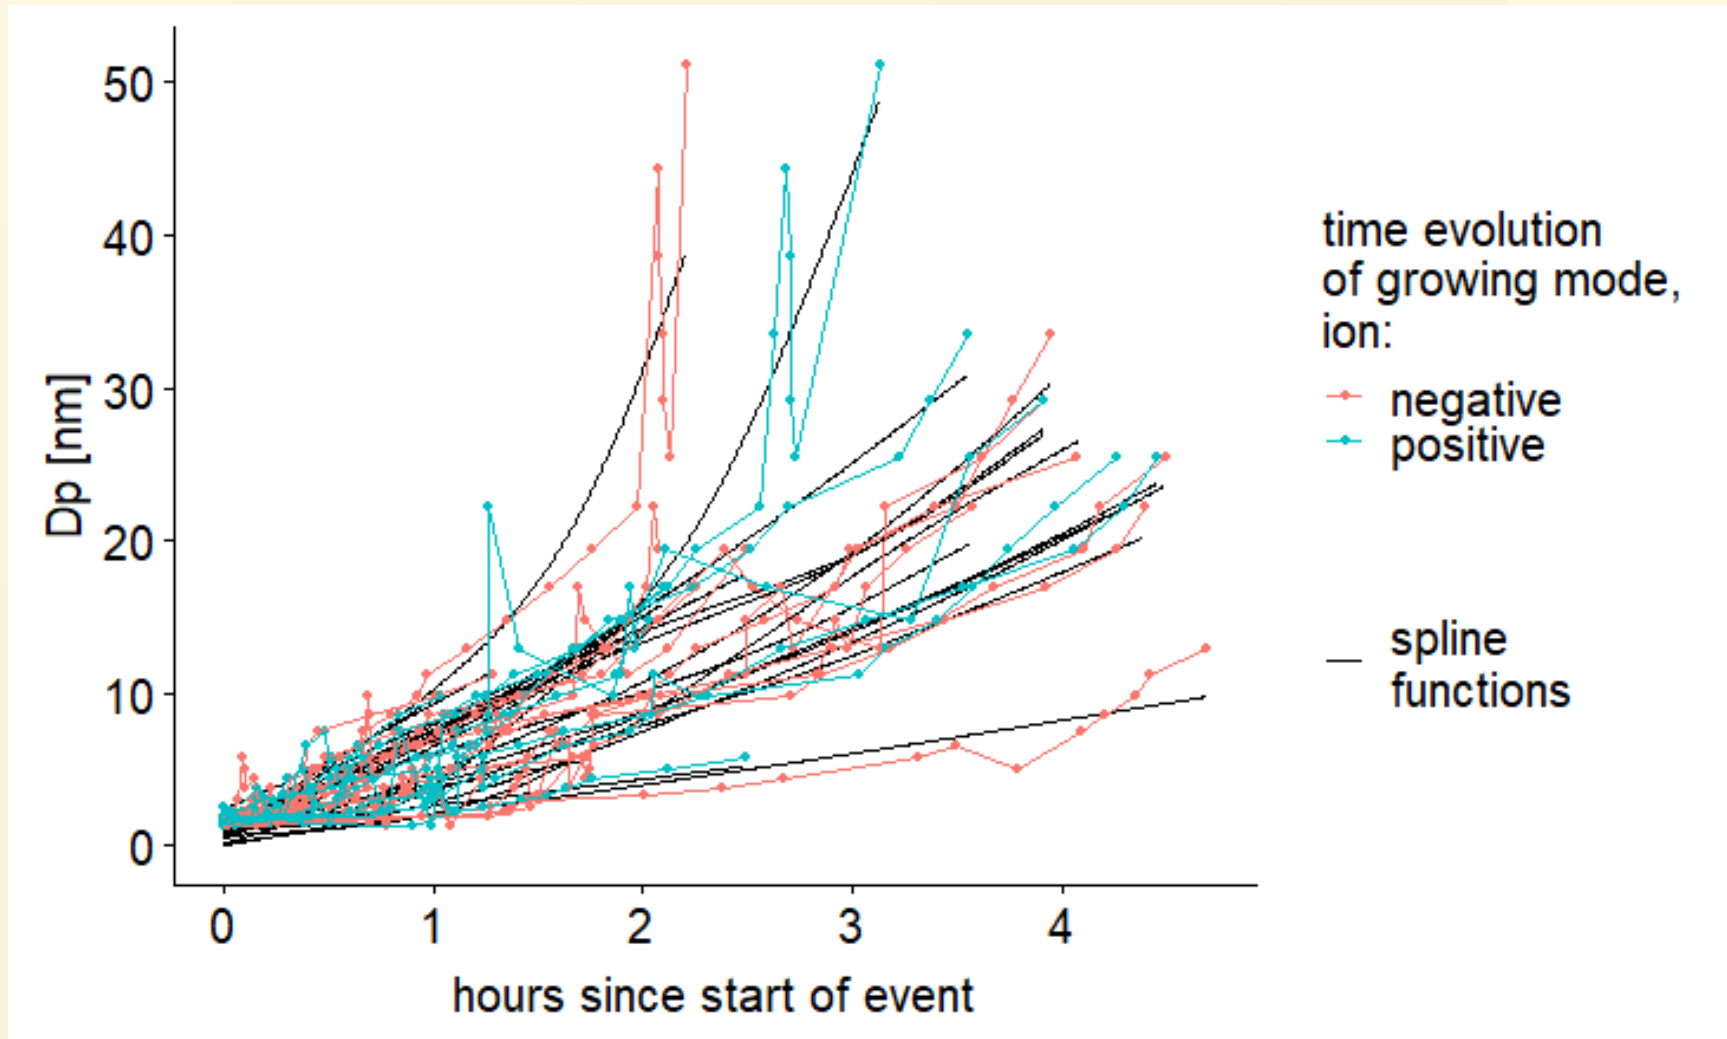

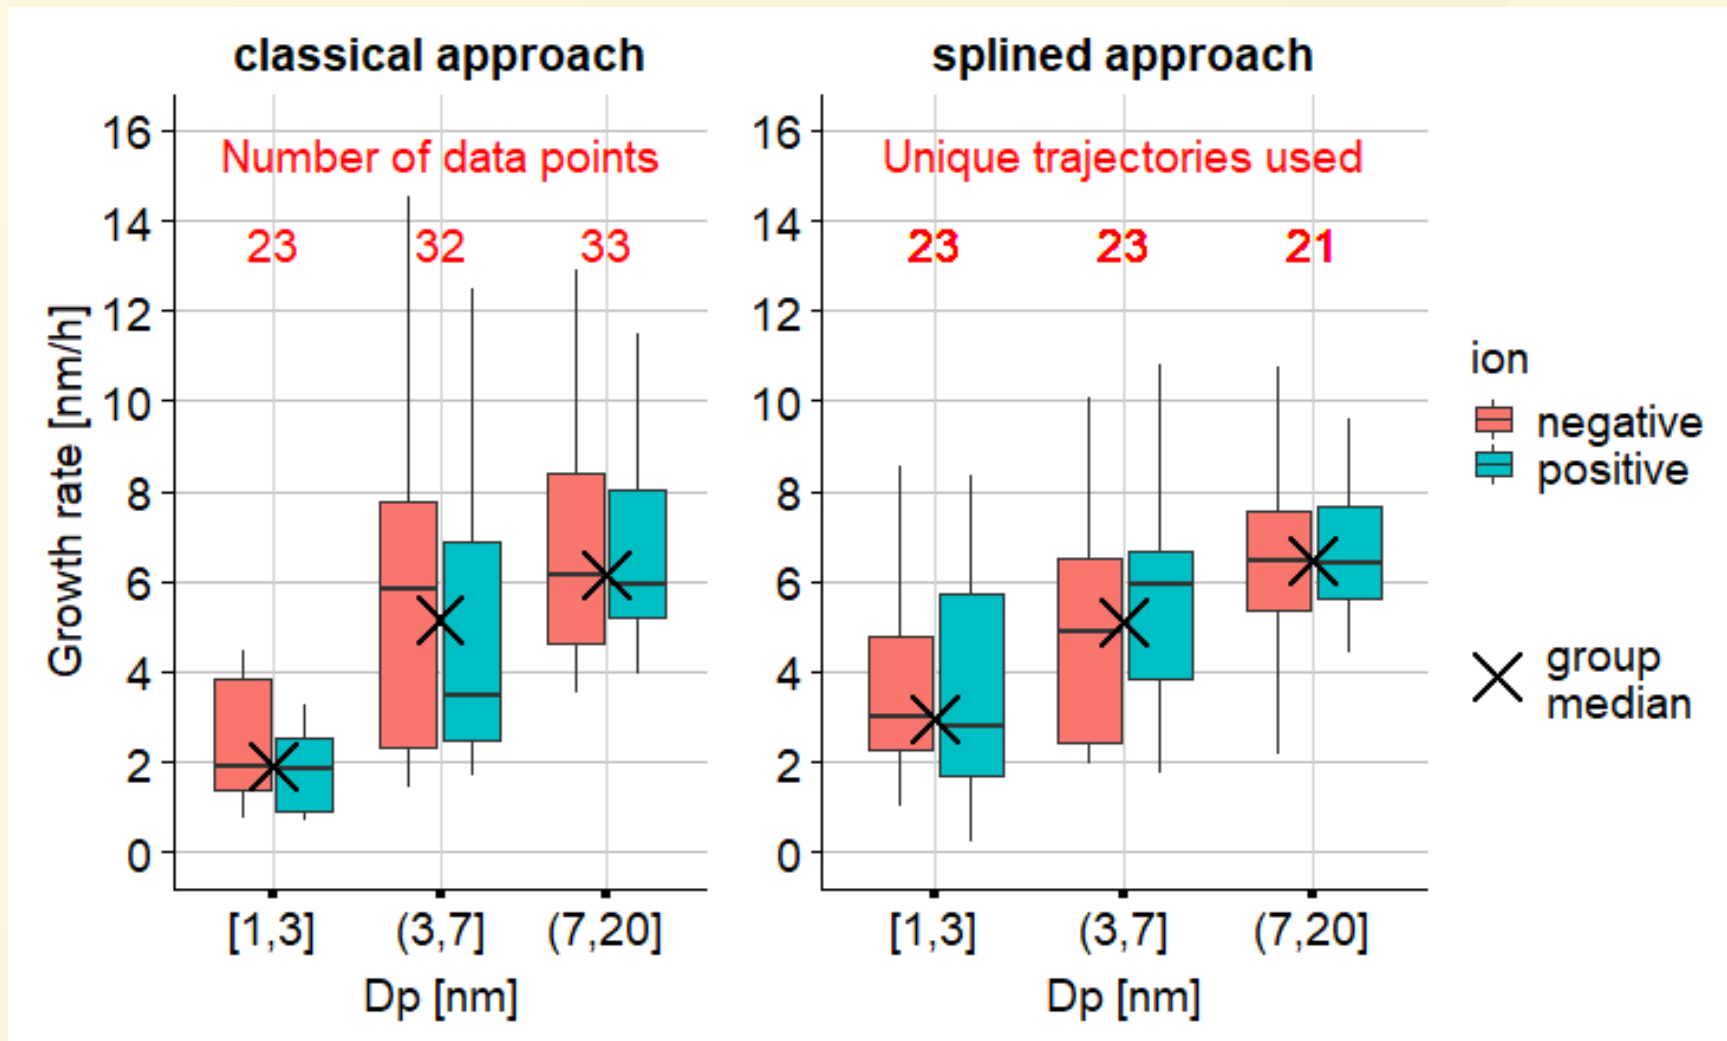

https://github.com/daliagachc/GR_chc/blob/master/Rproject/results/files/GR_CHC_splined_approach_all_events.csv

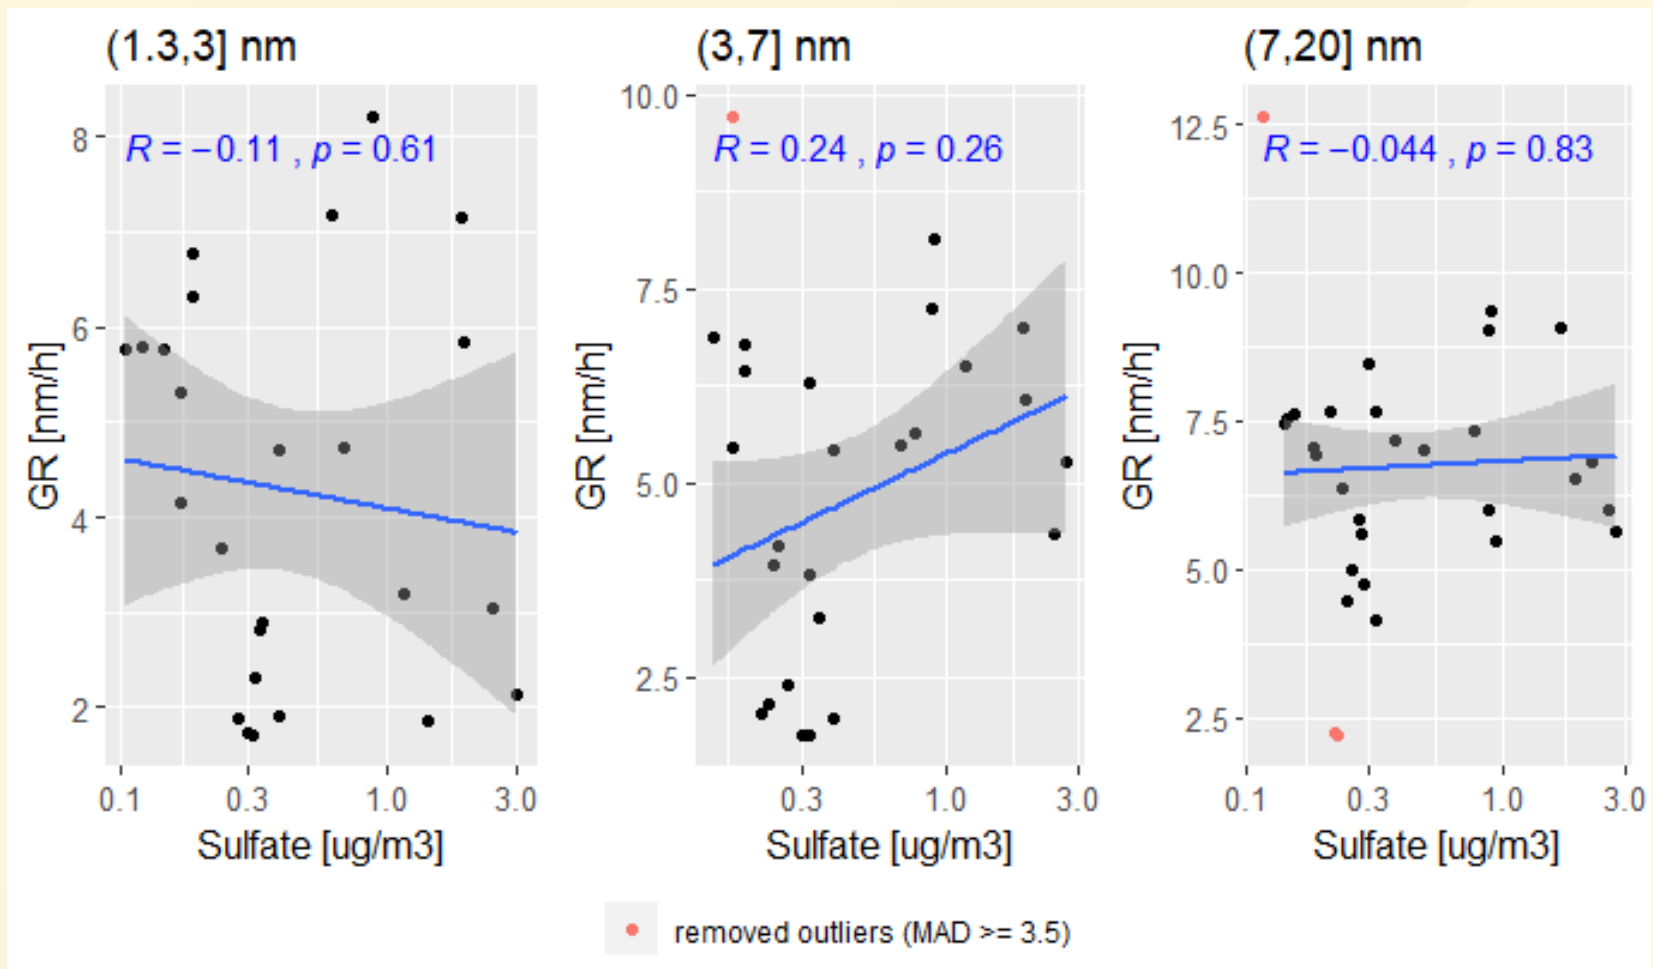

Linear correlation between GR and D_p [nm]

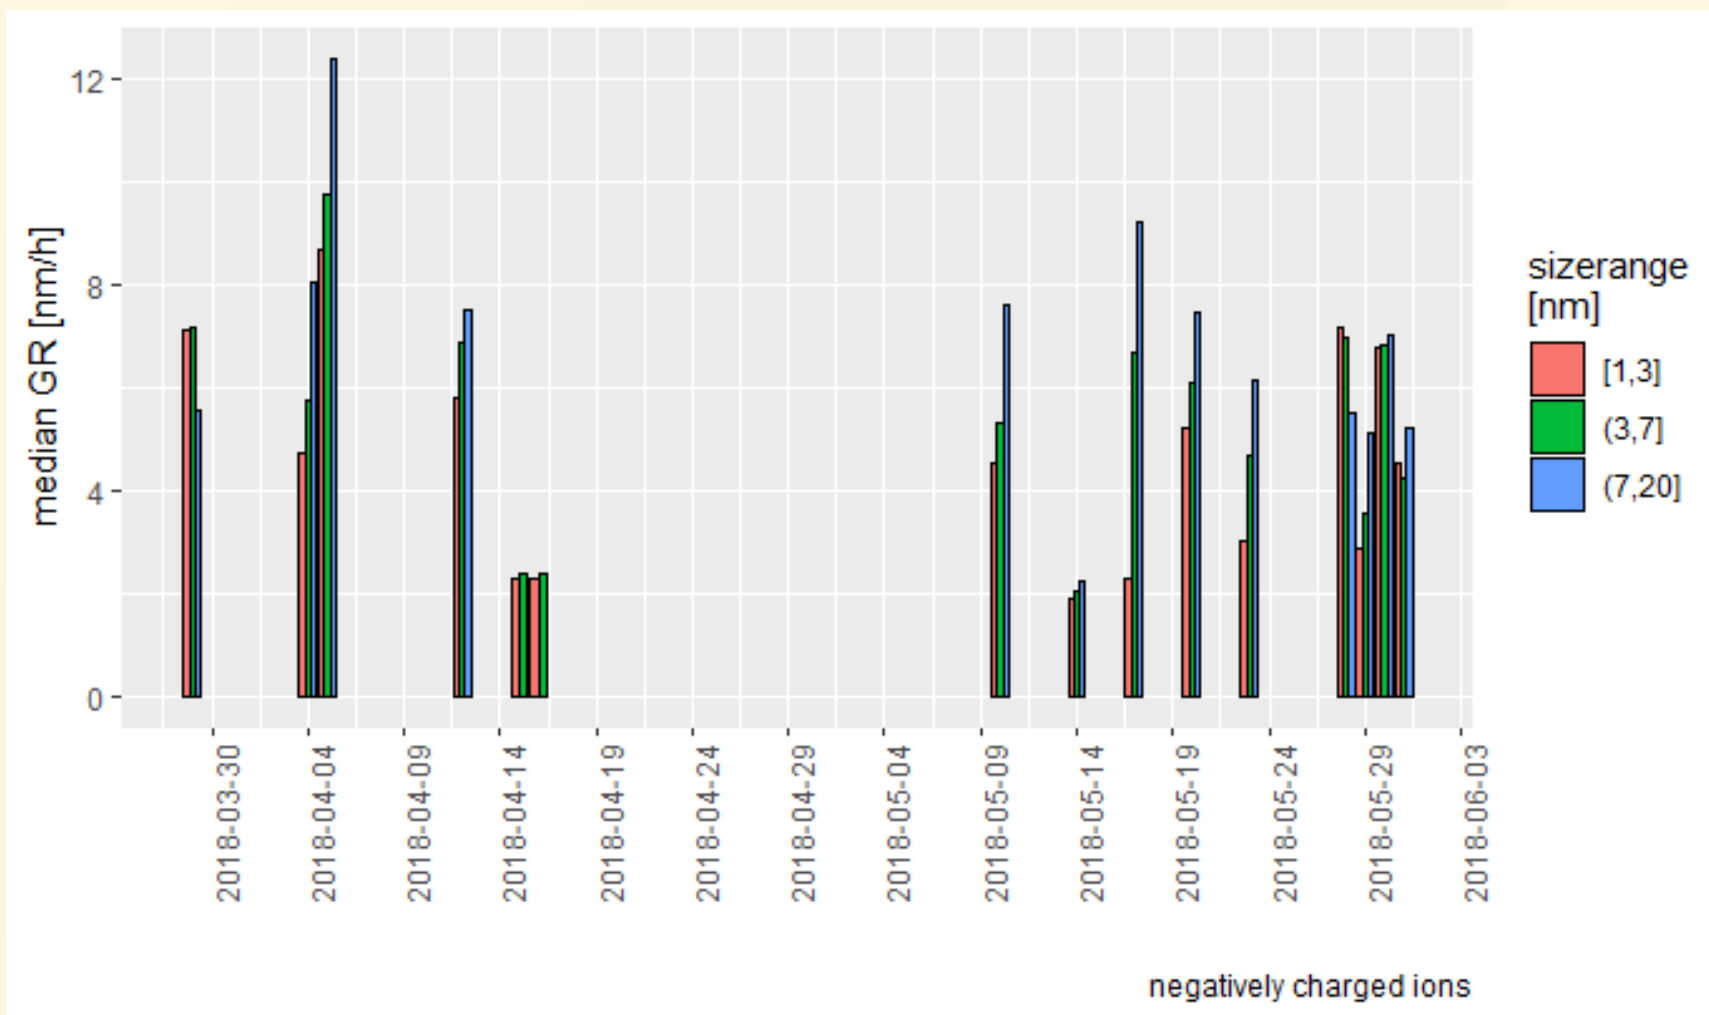

- methodology used to derive the growth rate using splines

- comparison between the classical approach and the splined approach

- no correlation with sulfates

- GR values for event days divided in bin sizes 1-3, 3-7, 7-20 nm
